Stratton Glass & Windows Ltd | Trading Since 1979

Introduction

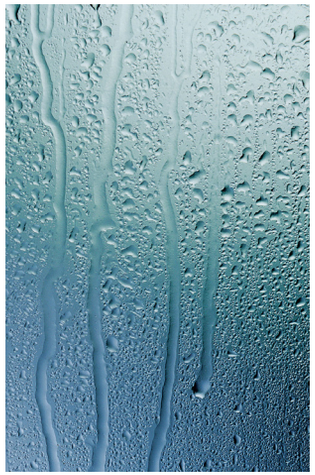

Since 1979 we've been installing secondary glazing.

The installation of secondary glazing , is a cost effective means by which to achieve all the advantages of double glazing without the upheaval involved with replacing your windows. This is particularly useful in the case of listed buildings.

Secondary glazing is designed to keep the heat in and the noise out. You could also save around 10% on your household bills by fitting our secondary glazing. Secondary Glazing is particularly suitable for use in listed buildings and conservation areas.

Reduced Condensation

Ventilation, humidity & moisture control are all essential factors for controlling condensation.

Condensation that forms on you windows can be reduced with our secondary glazing when combined with an externally ventilated window. The secondary glazing allows you to ventilate whilst keeping the inner glass from getting too cold thereby reducing condensation. This also protects your windows & walls from condensation damage.

Stratton Glass & Windows Ltd — Secondary Glazing

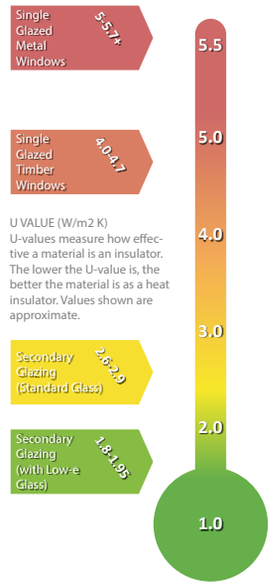

Thermal Efficiency

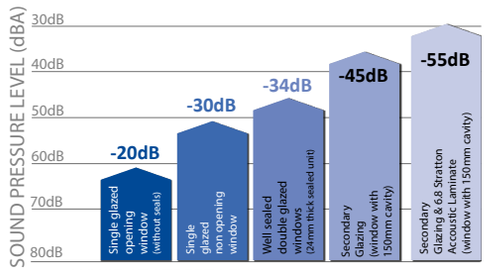

We offer standard 4mm and 6mm glass that will increase the efficiency of your home.

For ultimate secondary glazing enhancement we recommend using our low-e, hard-coat insulating glass. This added property dramatically enhances the thermal performance of the unit, almost to the same level as modern double glazing, thereby helping to reduce your energy bills.

Sound proofing

Even where double glazed windows are already fitted secondary glazing systems provide particularly good sound proofing. For added sound insulation we recommend using acoustic 6.4mm laminated glass that significantly reduces sound levels.

NOISE AT STREET LEVEL (values obtained online)

Conservation/Listed Buildings

Secondary glazing involves adding an extra slim-line window to your existing windows. Designed to suit almost any building, historic or contemporary, secondary glazing is designed to be as sympathetic as possible to the character of the building this makes it ideal for listed buildings and conservation areas.

Colours

We offer standard finishes of white, brown or silver. If you don't see a colour you like then we also offer a bespoke RAL colour service allowing you to choose from hundreds of additional colours.

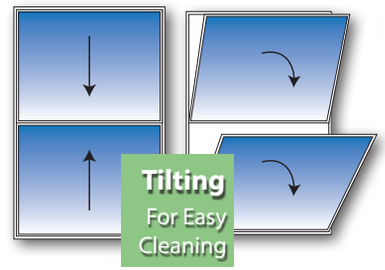

Designs

We offer an extensive secondary glazing range to cater to all of your needs. Designed to suit almost any building, historic or contemporary, and to be sympathetic as possible to the character of the building.

Vertical sliding

- Ideal for traditional sash windows.
- Spring balances included to support sliding sash in any position.
- Optional tilt facility for easy cleaning.
