UPVC WINDOWS

Storm, Flush and Tilt & Turn Casements

Storm Casements

The uPVC window we all know – tried and tested, built for warmth and security.

Security

Advanced security for total peace of mind.

Efficiency

Save energy. Save money.
Stay comfortable.

Glass & Windows Ltd
Stratton

Replacing your windows is one of the most effective ways to improve your home's comfort, security, and energy efficiency. Choosing a local, established company like Stratton Glass & Windows Ltd ensures expert advice, quality workmanship, and ongoing support you can trust – because your home deserves more than just a quick fix.

Low Maintenance

Low maintenance – effortless upkeep with long-lasting finish. Our windows stay looking great with minimal effort.

Contents

Tilt & Turns

Dual-opening, secure, and easy to clean.

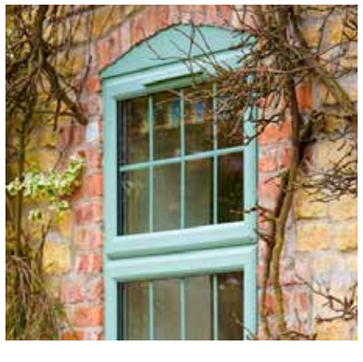

Flush Casements

A sleek, timber-look window with clean lines – perfect for modern or traditional homes.

Colours

Carefully curated finishes to suit every style.

Privacy Glass

Stylish patterns for added privacy.

Hardware

Hardware crafted for style and durability.

Choosing your Home Improvement Company...

Stratton Glass & Windows is a safe and reliable choice for your home improvement needs. We supply only high-quality windows and doors at fair, competitive prices. We recommend visiting one of our two showrooms – in Diss or Long Stratton – to see the quality for yourself. Proudly trading locally since 1979, you can trust that your guarantee is secure with us.

Stratton Glass & Windows Ltd

Our Journey: From One Van to Now

As a local, family-run company **since 1979**, we've always stuck to a simple principle: to provide high-quality products and service at a fair price. Over the years, that ethos has guided every step of our journey – from a humble start in Long Stratton to a purpose-built showroom in Diss.

Want to see how we got here? **Follow our company timeline and explore our story so far...**

1979: Starting in 1979, trading from a humble office space and a beat-up old van, Nicholas Jones began our journey.

1990: In 1990, we moved to our Long Stratton warehouse, where we still trade today.

2000: In 2000, we proudly expanded to a small showroom on Victoria Road in Diss, Norfolk.

2005: We moved to our purpose-built showroom and warehouse on Hopper Way in Diss – a move that quickly proved successful.

2025: Over 40 years since our humble beginnings, we're still proudly trading – thanks to our loyal customers and hardworking team. Since 2014, the company has been run by Nicholas's son, Harry, continuing the family values of selling high-quality, innovative, British-manufactured products at fair and honest prices.

Energy Efficiency – Built into Every Window

Energy ratings, U-values, G-values, double vs triple glazing – it can all get a bit confusing. Every window system is different, and the final performance depends not only on the frame but also on the glass and thermal coatings used.

We keep things simple, our storm casement windows are **A+ rated** as standard, minimising heat loss, meaning less reliance on your heating system.

For those wanting even more, we can supply **ultra-efficient options** with U-values as low as 0.5 – just ask. Whatever you choose, you can be confident in a high-performance result.

Did You Know?

Insight	Details
Annual Savings	Upgrading from single-glazed windows to high-efficiency A+ double-glazing can save homeowners in the region of **£400+** per year, depending on house type and glazing standard (based on GGF Energy Savings Calculator estimates).
Condensation Issues	Moisture between panes means the sealed unit has failed – allowing moisture to enter and the insulating gas to escape.
Improved EPC Rating	Energy-efficient windows can improve your Energy Performance Certificate, adding value and appeal to your home.

Co-extruded High Performance Bubble Gasket

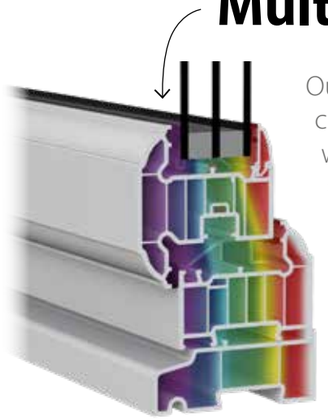

Our casement windows feature a co-extruded bubble gasket that's securely attached to the frame. Tested to BFRC energy rating standards, it achieves **zero air leakage** – unlike standard push-in gaskets – meaning no draughts or unsightly shrinkage.

Condensation Control – Clear and Comfortable

Condensation happens when warm, moist air meets a colder surface – usually glass. Everyday activities like breathing, showering, cooking or drying clothes release water vapour into the air. When this vapour hits a cold pane, it turns into droplets. Bedrooms and bathrooms are often the worst affected. Our windows help keep the inside pane of glass clear of condensation.

Multi Chamber Frames

Our insulated glass units and multi-chamber frames keep the inner pane warmer, **helping prevent condensation** and **reduces energy bills**.

Even with double glazing, our 6-chamber frame achieves an **A+14 rating**.
For top efficiency, our 9-chamber Passivhaus approved frame reaches A+40 with quadruple glazing.

Purge Ventilation

Regularly opening windows – known as purge ventilation – is one of the most effective ways to reduce moisture build-up and prevent condensation and mould, especially in bedrooms and bathrooms.

For added security and peace of mind, our Storm Casement and Resurgence windows offer a **lockable night vent position**, allowing you to safely leave a window slightly open while maintaining security – ideal for overnight ventilation.

“

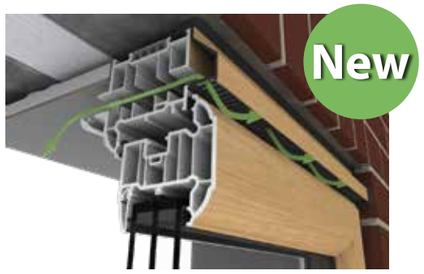

It is important that the dwelling can constantly breathe – good indoor air quality is important for health and also helps protect the fabric of the building from the harmful effects of condensation and mould etc. – **FENSA.org**

Background Ventilation

Moisture settles on cold surfaces without airflow. Background ventilation prevents condensation and mould by letting moist air escape and fresh air in. Trickle vents ensure a constant, controlled airflow to keep your home fresher, drier, and healthier.

Standard Hood Vents

Cost-effective choice, fitted to the sash or outerframe (shown in pic). These are available in solid base plastic colours (e.g. caramel on Irish Oak), but not exact foil matches.

Concealed Head Vents

Neatly built into the head drip and fully colour-matched to your frames, making them ideal for foiled finishes and a sleeker appearance.

Security – Safe and Sound

Your home's security is our priority. That's why all Stratton Glass & Windows **uPVC casement window locks meet PAS24 standards**, and with a simple upgrade are also available to **Secured by Design** specification – the official UK Police initiative for safer homes.

From **multi-point locking** on casements to robust locking mechanisms on sliding sash windows, we ensure every frame is designed with protection in mind.

We also incorporate a number of other security features as standard – including internal glazing, reinforced lock strips, and anti-jemmy wedges – which we'll explore in more detail on the following pages.

High Security Locks

Our casement windows feature the **Neighbourhood Watch-approved** ERA Extreme lock, with up to **11 locking points**, including a shootbolt at the top and bottom. It offers up to 300% more contact area than many standard locks.

For added peace of mind, ERA provides a **£5,000 security guarantee** if the lock fails in a break-in.

"

Double glazed windows are more secure than single glazed windows because they are twice as tough. With an additional pane of glass, that's one more line of defence between your home and any unwanted intruders. – **FENSA.org**

Security Glass Option

Glass is often the most vulnerable part of a window. While double glazing offers good protection, laminated glass goes further. Required for Secured by Design (SBD) standards, it features a tough plastic interlayer that holds shards together if broken – making entry harder.

Internally Glazed

Our uPVC windows and doors are internally glazed as standard, meaning the glass is installed from the inside. This improves safety for our installers and prevents potential intruders from easily removing the glass from the outside.

Anti-Jemmy Wedges

Unlike many windows that rely only on locks, our casement windows have **opposing wedges on the hinge side** that prevent forced opening at both hinges and locks. When locked, they stay secure.

Low Maintenance –
Lasting Looks, Minimal Effort

Our uPVC windows are built for lasting looks and low upkeep.
The wipe-clean finish needs no painting, while colour-fast foils stay vibrant for longer – without fading or peeling.

Heavy-duty hinges ensure smooth, reliable performance with minimal maintenance – year after year.

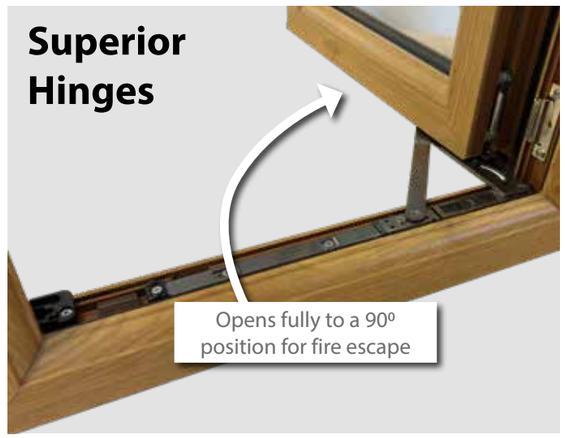

Durable Hassle-Free Care

Our uPVC windows have durable, colour-fast finishes that stay looking great for longer with minimal upkeep – just the occasional wipe and light lubrication of moving parts. With a **25+ year life expectancy**, they can outlast timber without the hassle.

Heavy Duty Hinges, Built to Last

At Stratton Glass & Windows, fair pricing never means cutting corners. That's why all side-hung casements over 400mm wide – including Storm, Resurgence, and Flush – come with heavy-duty hinges as standard. Tested to 25,000 cycles under 40kg, they're smooth, reliable, and built to last. The integrated easy-clean feature makes maintenance simple and safe – no ladders needed.

Fire Escape Function

Our side-hung windows open to a full 90°, providing a safe and compliant fire escape option for upper floors.

Easy Clean Facility

This feature lets you slide the window sash across, giving access to the external glass from inside your home – ideal for upper-floor cleaning.

“

The correct installation of good quality, well-made windows can result in a noticeable reduction in noise levels.
– **GGF.org.uk**

Noise Reduction – Peace and Quiet Built In

At Stratton Glass & Windows, our casement window systems help reduce unwanted external noise – whether it’s traffic, neighbours, or urban bustle.

Our 70mm system can deliver an impressive acoustic rating of 37 dB (-2; -5) when paired with the right glazing unit – offering a noticeable improvement in comfort for most homes. For even greater performance, our triple-glazed 90mm system, can achieve up to 42 dB (-2; -6).

Acoustic Glass

For extra noise reduction, upgrade to acoustic laminated glass. A special membrane blocks more sound than standard glazing – ideal for homes near roads, railways, or flight paths.

Acoustic Vents

Reduce noise without sacrificing ventilation to your home.
Acoustic trickle vents help block external sound while still maintaining ventilation for a healthy airflow.

Stratton Glass & Windows Ltd
Est. Since 1979

Professional Installation – Trusted Locally Since 1979

For **over four decades**, our local family-run business has stayed true to the same core values: treating customers the way we'd like to be treated.

We keep things simple. First, we offer clear, honest quotations based on well-informed advice – never with pushy sales tactics. Second, we only supply high-quality products at fair prices. And finally, all our installations are carried out professionally and backed by our 10 year guarantee.

Expansive Showrooms

Explore our full window and door ranges in person and get a feel for the quality. You'll also meet our friendly, knowledgeable team who are happy to answer any questions in a relaxed, no-pressure setting.

Book a Free Design Visit

Our experienced sales team will help you find the right products for your home. We offer CAD drawings and installation photos to make the decision process easier and more informed.

Qualified Tradesman

All our installers are **NVQ** or **MTC qualified** and we are FENSA-registered. This ensures your installation meets building regulations and is completed safely, professionally, and with minimal disruption.

Hassle Free After Care

We're here for the long run. Whether you need advice, support, or a small adjustment down the line, we're happy to help – and all installations are covered under our 10 year guarantee, which is insurance-backed for peace of mind.

Our Industry Accreditations & Commitments

FENSA Approved Members

Confirms we are competent window and door installers, working to current building regulations.

Glass and Glazing Federation Members

Member of the Glass and Glazing Federation, committed to high technical standards and consumer protection.

A Warranty You Can Rely On

With over four decades of trading, you can rely on our 10 year guarantee and customer care.

Insurance Backed

Provides insurance-backed guarantees to protect your warranty if we ever stop trading.

TSI Approved

As GGF members, we are enrolled into TSI, recognised by the Trading Standards Institute for fair, transparent business practices.

PAS24 Accredited Locks

All our storm and flush casement locks meet PAS 24 security standards for enhanced protection against forced entry.

Clients Testimonials

Since 1979, Stratton Glass & Windows has transformed around 40,000 local homes, earning thousands of happy customers.

Here are just a few of their comments…

“

Perfect from start to finish

We had a door and five windows replaced in two days with an amazing finish and minimal mess. Our home has been transformed. Highly recommended!
Harnett – Google.com

“

First-class craftsmanship and design

The work was first class, with excellent design input and skilled, well-organised craftsmen. The whole process was smooth and professional. Highly recommended!
Dawson – Google.com

“

Fast, clean, and professional

From quote to installation, Stratton was professional and knowledgeable. The installation was quick, clean, and the windows are far superior to our old ones.
Simon – Google.com

Glass & Windows Ltd Stratton

Storm Casement Windows

Our Eco-Energy Storm Casement Window is based on the trusted classic uPVC casement we all know. Made in Britain, it combines timeless style with advanced technology – featuring a multi-chambered frame for excellent thermal efficiency, slim sightlines for more natural light, co-extruded gaskets to reduce noise and draughts, and high-security features for complete peace of mind.

What Makes our Window Frame Different?

We have outlived more than <u>four</u> 10 year warranties. During this time we have used various window and door constructions. This has given us the invaluable opportunity to wean out the weaker profiles that can be susceptible to repeated service calls. We are incredibly proud of our window range due to its durability, quality and style. We hope you like it too.

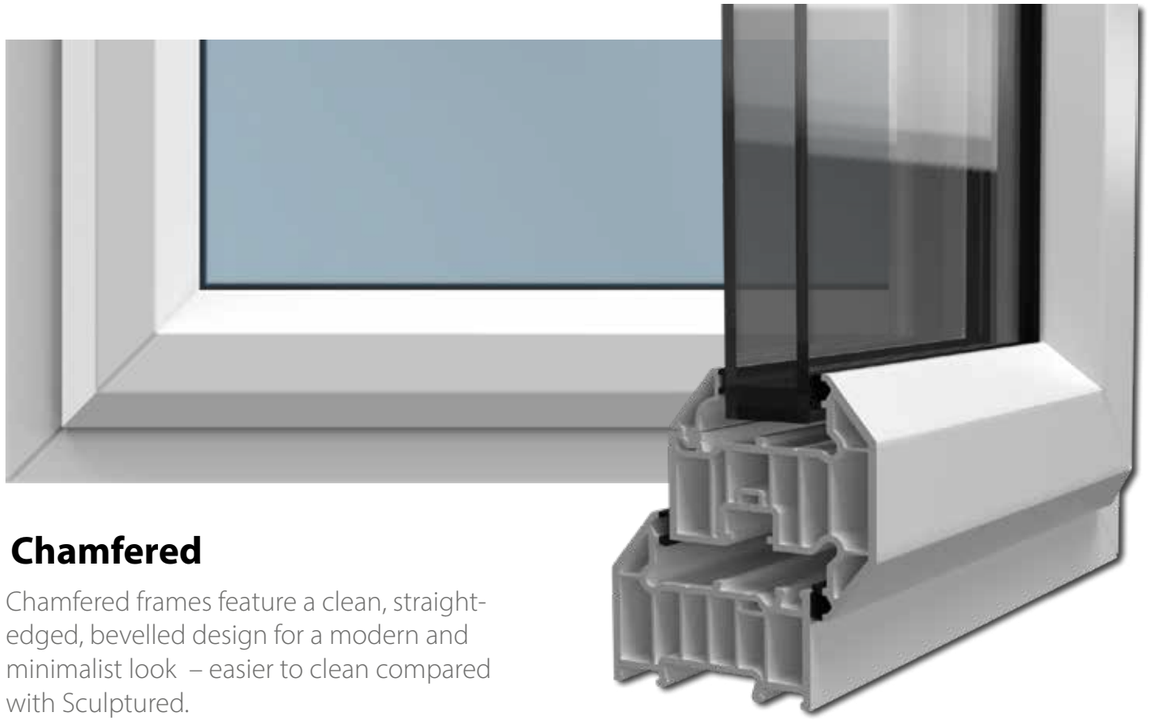

Features	Glass & Windows Ltd Stratton *Eco Energy+ Storm Frame*	**Competitors** Typical Trade Frame
Chambers (Front to Back)	**6 Chambers (Front to Back)** Our profile has 6 chambers front to back, which is double the industry standard. This boosts thermal efficiency and strength.	**3 Chambers (Front to Back)** These profiles have fewer air gaps for insulation and require steel for reinforcing, which causes cold spots.
Lead Free	**Lead Free Frame** Made from eco-friendly, lead free, fully recyclable PVC.	**Leaded Frame** Some PVC window companies still use lead in their frames.
Gasket	**Co-Extruded, Anti-Mould Gasket** Gasket springs back and is attached to the frame to prevent shrinkage.	**"Pushed in" Gasket** This is susceptible to mould and unsightly shrinkage in the corners.
Origin	**British Engineered & Manufactured** Our profile is proudly engineered and fabricated here in England.	**Engineered & Manufactured Abroad** The majority of frames are extruded and designed abroad.
Energy Rating	**Up to A+40 Rated** Due to its construction, our profile is capable of achieving an A++ rating.	**A or A+ Rated** The majority of windows and doors can only achieve an A rating.
Warranty	**10 Year Warranty** Outliving over four 10 year guarantees, our PVC frames, glass and installation are backed by our <u>10 year warranty</u>. Our warranty is also insurance-backed for peace of mind.	**10 Year Warranty?** Some warranties aren't worth the paper they are written on. Make sure your installer is insurance-backed and has traded for more than 20 years.

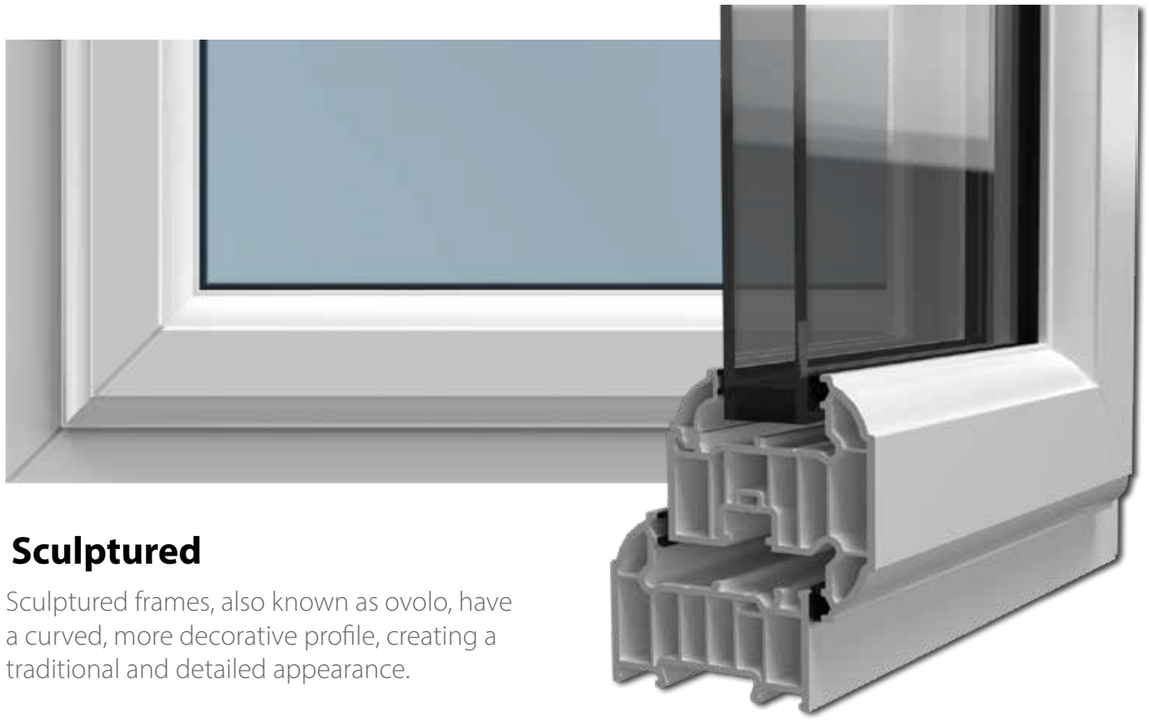

Storm Casement Frame Style Options

We offer two Storm Casement profile styles – Chamfered and Sculptured, each with its own benefits. If you're unsure, you're welcome to view both options in our expansive showroom.

Chamfered

Chamfered frames feature a clean, straight-edged, bevelled design for a modern and minimalist look – easier to clean compared with Sculptured.

Sculptured

Sculptured frames, also known as ovolo, have a curved, more decorative profile, creating a traditional and detailed appearance.

Triple Glazing

Our Storm and Resurgence windows can be triple glazed to maximise thermal efficiency.

Mock Sash Horn

Add traditional character with an optional mock sash horn – offering classic styling with modern performance.

French Casement

Also known as fly mullion, opens without a fixed central bar, providing an unobstructed opening – ideal for fire escape.

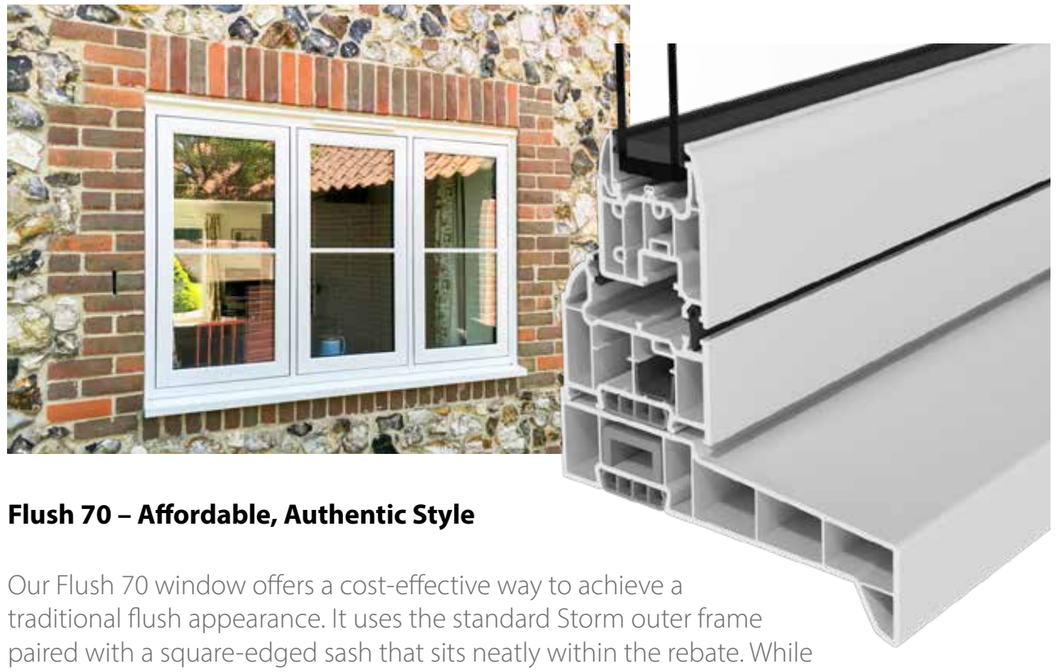

Est. Since 1979

Flush Casement Windows

Flush Casement windows offer the same trusted quality and most of the core features as our Storm range – with one key difference: the **casement sits flush within the frame** for a cleaner, more traditional look. Ideal for period homes or modern properties seeking minimalist lines, they deliver excellent thermal performance, low maintenance, and high security.

Choose from two styles – Flush 70 and Resurgence – both blending flush aesthetics with modern efficiency.

Flush 70 – Affordable, Authentic Style

Our Flush 70 window offers a cost-effective way to achieve a traditional flush appearance. It uses the standard Storm outer frame paired with a square-edged sash that sits neatly within the rebate. While it shares the same frame as the Storm Casement, the sash does not overlap, giving the visual effect of timber with the practicality of uPVC.

Resurgence – Premium Performance

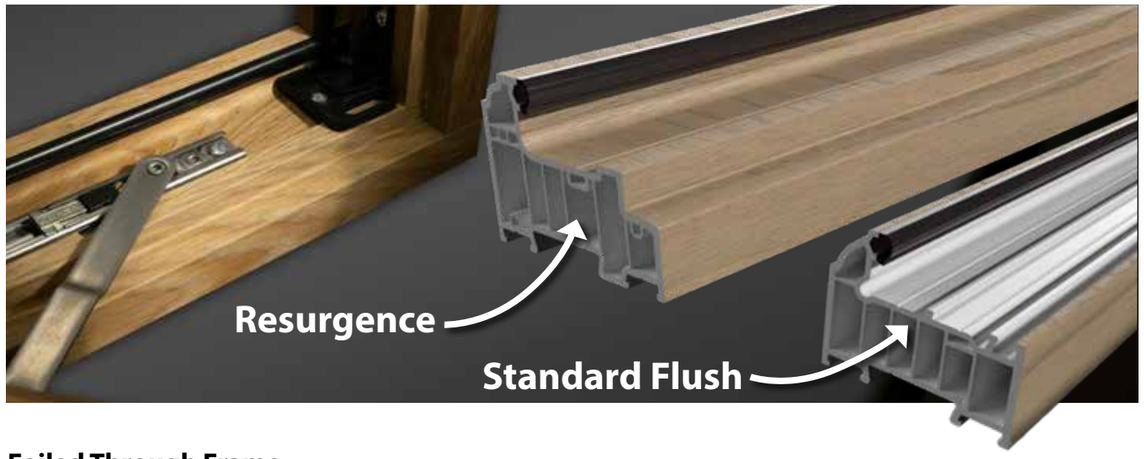

Resurgence is our premium flush option, designed for superior performance and authenticity. The 80mm deep frame features dual rebates that conceal the gaskets, enhancing both weather protection and acoustic insulation. With timber-style butt joints and the option to fully foil the outer frame, it's ideal for customers seeking a true heritage finish.

Resurgence: The Premium Flush Window

Concealed Gasket

Most flush windows have visible external gaskets – but not Resurgence. Its double-rebate frame hides the sash seal from view, maintaining clean lines while providing the same high-level draught proofing as a traditional storm window.

Foiled Through Frame

Unlike standard uPVC windows, Resurgence can be fully foiled through the outer frame and transoms, creating a more authentic timber appearance when a coloured finish is chosen.

Double Or Triple Glazed

Resurgence's rebated frame supports both 28mm double and 36mm triple glazing, for maximum thermal efficiency.

Sculptured

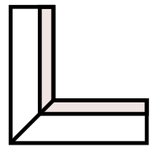

Chamfered

Traditional Mounted Bar Option

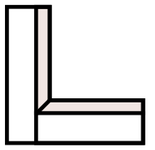

Standard flush windows offer chamfered astragal bars, while Resurgence features sculptured bars for a more traditional look.

Timberweld® Join

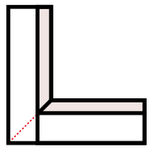

Timberweld® is a patented method of joining uPVC or aluminium frames with a traditional-looking "butt joint" – just like timber. It offers the strength of a welded joint, with the authentic appearance visible inside and out.

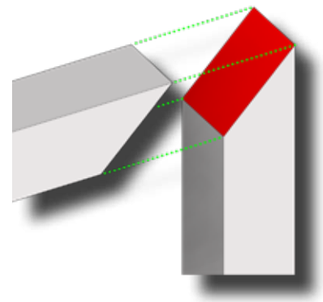

Welded
Frame is cut diagonally, welded, and screeded to form a visible diagonal join.

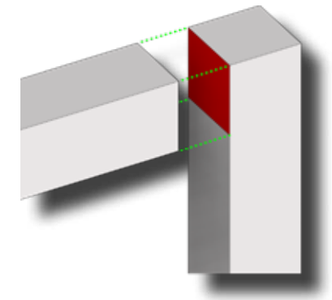

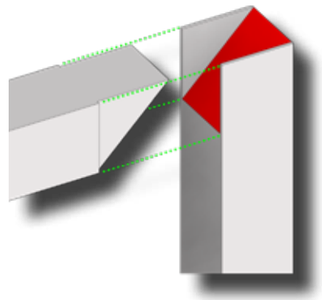

Mechanical
Frame is cut straight, butted together, and mechanically fixed – resulting in a straight join.

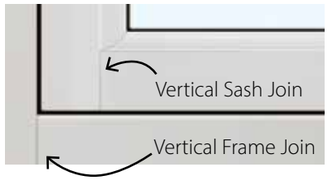

TIMBERWELD®
Best of both – cut inside and welded internally for a clean, sealed straight join.

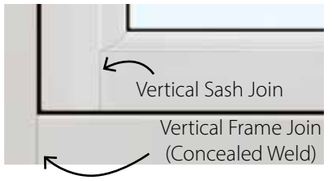

Which Flush Window is Right for You?

Both offer a flush finish, but Resurgence includes premium upgrades like a double rebate, concealed gaskets, Timberweld® joints, and a fully foiled frame for a more authentic timber look.

Feature	Flush 70	Resurgence
Frame (Front to Back)	70mm Frame	80mm Frame
Rebated Frame	Single rebate, visible brush seal	Double rebate, concealed gasket
Foiled Through Frame	✗	✓
Outer Frame Joints	Mechanical or diagonal weld	*Timberweld*
Night Latch	✗	✓
Price	Great value, entry-level flush	Premium, high-spec flush design

Bigger Views, Brighter Rooms

Unlike standard casement windows, which typically have a maximum opening height of around 1300mm, our tilt & turn windows can offer 1500-1600mm – giving you larger windows with less frame and more glass to maximise light and airflow.

Secure Ventilation

One of the main benefits of the tilt & turn window is secure ventilation. Turn the handle to 90°, and the window tilts inward – ideal for letting in fresh air while keeping your home secure, even when unattended.

Glass & Windows Stratton Ltd
Est. Since 1979

Tilt & Turn Windows

The Stratton uPVC tilt & turn window opens inward, making it ideal for easy cleaning from inside the home.

Perfect as a fire escape or simply to let in more fresh air, the tilt & turn design allows for larger opening sections than traditional casement windows.

Tilt or Turn – You Decide

As the name suggests, the tilt & turn window offers two opening options: Turn the handle to 90° to tilt the window inward from the top for secure ventilation, or to 180° to open it fully from the side – perfect for easy cleaning and maximum airflow.

Easy Cleaning

The inward-opening design makes it easy to clean both sides of the glass from inside – no ladders or awkward reaching required.

Bay and Bow Windows

Bay and bow windows are a great way to add space and flood your home with natural light. Available in square or multi-facet designs, they create a more open feel and enhance kerb appeal.

Our bay window corner posts come with fluted claddings that break up the facade and create an authentic timber bay window effect.

Arched and Shaped Windows

We can bend profiles to create arched tops, circular pivot windows, or even curved hinged designs.
Whether it's a true arch or a custom shape made to template, shaped windows add a distinctive architectural feature and a unique focal point to any space.

Glazing Customisation

Enhance your windows with leaded glass (square or diamond), internal Georgian bars, or mounted astragal bars in grid or single vertical/horizontal layouts. For a modern finish, opt for internal blinds sealed between the glass – available in manual or electric.

Internal Georgian Bar

Fitted between the glass panes, internal bars offer a cost-effective way to achieve the traditional bar look – while keeping the outer glass surfaces smooth and easy to clean.

Mounted Astragal Bar

Mounted on the glass surface with a matching spacer inside the unit, astragal bars provide a more authentic, traditional look by recreating the appearance of individual panes.

Leaded Glass

Using self-adhesive lead, we can create traditional designs such as diamond or square patterns – adding classic character to your windows.

Internal Blinds

Sealed between the glass, internal blinds offer a sleek, low-maintenance solution for light control and privacy. Choose from manual or fully electric options for convenience and a modern finish.

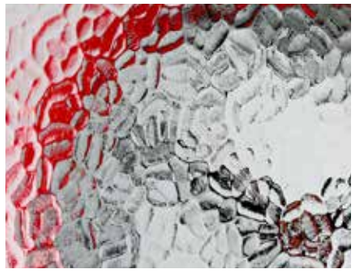

Privacy Glass

Ideal for bathrooms or any space needing a little extra privacy, our patterned glass options offer both style and discretion. We supply Pilkington's extensive range of 20 original textured designs – from classic to contemporary – each providing a different privacy level (from 1 to 5) to suit your needs and personal taste.

Some colours have a RAL code (shown as a 4-digit number). RAL numbers quoted are the nearest match. Certain colours are specially produced and may require longer lead times – please check availability. Foiled finishes vary in texture: some are grained, others smooth. Colours shown are illustrative only. Print reproduction may not reflect the true finish – please request a swatch for accuracy. Foils are applied to the visible faces of the uPVC frame when closed. When open, the substrate will be visible. Substrates are available in white, black, caramel, brown and cream (product-dependent). "Inside" and "outside" colours refer to the visible frame surfaces when closed. Product exclusions: Resurgence windows, uPVC bifold doors and uPVC sliding patio doors are not available with a black substrate. Resurgence is not available with a caramel substrate. Colours and substrates available are subject to change.

Handles – Designed for Comfort, Security and Style

At Stratton, we provide only the highest quality windows and doors – which is why we use the robust yet stylish ERA Everywhere hardware.

Espagnolette Handles

Used on our Flush and Storm Casement windows, these handles operate the multi-point locking system. The lockable offset design has been tested through 50,000 cycles and meets PAS 24:2012 security standards – keeping your home safe and secure.
